How dustless sanding can **benefit your business**

A simpler, quicker way to achieve a **high-quality finish**

Dustless sanding is a clever solution to the dust problem. Sanding without disturbing dust particles provides better control over the work and so a better final result: a cleaner surface with a smoother finish.

Helping you to **win more business**

Switching to dustless sanding can reduce the time it takes to complete a project, cutting labour costs and helping you stay more competitive.

Move onto the **next job faster**

The latest dustless technology is designed to give you the best finish with less mess. Clean up takes next-to-no time, leaving you free to move on to the next job.

How dustless sanding can benefit your health

Dust from sanding fillers, plaster, paint, wood & other substrates are all **potentially harmful to your health**.

Dustless sanding eliminates all of these potential hazards and makes for a safer working environment. It's also far less messy, meaning less dust in your clients homes and less time spent clearing up at the end.

What sanding option is right for you?

	Machine Type	Noise	Weight	Voltage	Size (mm)	Orbital Sander	Random Orbital Sander	Wall & Ceiling Sander
Windows, Doors and Frames	Mirka® DEOS	69db	.97kg	240/110	81 x 133	Yes	No	No

Mirka® Inventing the revolution

Mirka® is a global company and we have a long-standing tradition and passion for perfect surfaces. Thanks to this genuine interest and focus, Mirka® has become a world leader in abrasives technology and innovation and revolutionised the **dust-free sanding** world.

For almost eight decades, **Mirka® has been in the forefront of technology.** When it comes to excellent finish, they have the passion to exceed the expectations. It all started in 1943 and the story continues.

Decades of experience and a strong commitment to product development has seen Mirka become a pioneering specialist in flexible abrasives and revolutionary, patented products which allow customers to **enjoy a truly dust-free surface finishing process.**

MIRKA

Kit includes:
Power tool case, sanding pads & safety glasses.

KIT2204CDMUK/KIT2203CDMUK 6428334*/6423627

Mirka® DEOS Kit

81 x 133

Key features:

- Vibration Sensor Via **myMirka** App
- 3mm Orbit Sander
- Ergonomically designed to be less than 100mm from the sanding surface, giving better control of the tool
- Brushless motor technology
- Suitable for windows, doors and frames

Bluetooth Connectivity	Power Supply	Vibration Level	Weight
 Bluetooth	 240v/110v	 2.6m/s2	 .97kg

MIRKA

Kit includes:
Sanding pads & safety glasses.

KIT2206CDMUK/KIT2205CDMUK 6423529/6423575

Mirka® DEOS DELTA Kit

100 x 152 x 152

Key features:

- Vibration Sensor Via **myMirka** App
- 3mm Orbit Sander
- Ergonomically designed to be less than 100mm from the sanding surface, giving better control of the tool
- Brushless motor technology
- Corner profile suitable for hard to reach areas at any angle

Mirka® Abranet® Technology

Mirka's® industry-leading Abranet® technology has achieved a completely even sanding net. Its thousands of holes provide phenomenal dust extraction. With just half a millimetre in distance from a sanding particle to the closest dust extraction hole, this clever structure provides **even and efficient sanding**.

Removing dust is the best choice for making your workplace more efficient. **A dust-free environment reduces time to completion**, meaning **fewer man-hours** for you. Then, you can focus on what is essential: **spending more time on the refinishing itself**.

Sanding techniques & top tips

- **Start slow** – Scrubbing back and forth at speed creates unwanted swirls and scratches, take your time!
- **Go lightly** – Pressing down on your sander is a common mistake; It can slow or stop the pad's rotation, creating those unwanted swirls. The weight of the sander and your arm is enough pressure.
- **Place the sander on your work before turning it on** – If the sander is running before you set it down, chances are it will dig in and leave deep scratches. You can lift it up with the motor running but turn it off before you start sanding again in a new area.
- **On a large surface, sand with overlapping passes** – For the best results, overlap each pass by about 50 percent. Sand once over the entire area with each grit to achieve a smooth surface.
- **Hold it low** – To avoid tipping a sander, especially on a narrow surface, grasp it around its neck. Tipping a sander leads to unwanted gouges, scratches, and rounded edges.

The Home of Painting and Decorating Excellence

Our team of experts will give you the opportunity to learn from the best, with a wide range of courses available we're sure to have something that supports your professional ambitions. Keeping classes small, you will have time to get all your questions answered and benefit from the teams experience.

Perfect Preparation Course

1 day - £150 + VAT

They say 'it's all in the preparation' and this one-day course aims to show you exactly why! Using the latest products and tools from across the decorating industry this one-day practical course will ensure that you learn how to create a prepared surface that will ensure a quality finish for your customer.

This course will:

- Provide an understanding of **surface preparation standards**
- Explore various types of **preparatory products and equipment**
- **Develop skills** in filling techniques
- Showcase the **benefits of some of the industry-leading tools** including **dust-free sanding**

We now have **over 50 courses** available.

Locations

Dulux Academy deliver courses at a range of locations across the UK including within our **Dulux Decorator Centre stores:**

Altrincham Norwich Scunthorpe
West Thurrock Newport **More coming soon...**

Electronic Waste Take Back Scheme

We partner with **Veolia** to ensure your old **Waste Electrical and Electronic Equipment (WEEE)** is taken to an **Authorised Treatment Facility to be recycled**. This ensures that the plastic and metal in your electricals is recovered and what cannot be recycled is disposed of responsibly. **We are the first decorating merchant to offer takeback of WEEE.**

We offer this service

FREE
of charge

How do I recognize items subject to WEEE Regulations?

Simple! If something is powered by electricity, it's considered **WEEE** at the point it's potentially going to go in the bin. Items such as sanding machines and associated extractors and airless and HVLP spray machines. All items that are subject to **WEEE Regulations** are marked with the **crossed out wheelie bin symbol** to remind you that these items should not be disposed of in the bin.

Why is managing WEEE important?

Approximately **155,000 tonnes of electrical items end up in landfill each year** and this number continues to grow, WEEE is in fact the fastest growing waste stream in the UK.

The amount of WEEE that goes to landfill is **worth up to £370 million** in materials that could be reused.

If all the electrical waste created in the UK was recycled, **this would save 2.8 million tonnes of CO2**. That's equivalent to taking **1.3 million cars** off the road.
